

THE AI PROSPERITY COMPACT

Artificial Intelligence (AI) promises to power a new era of industry by enhancing productivity, competitiveness, and scientific progress. AI has the potential to accelerate industrialization, reindustrialization, and economic growth, revitalize our factory floors, and energize micro, small, and medium enterprises (MSMEs). The rapid advancement of AI will have implications for the workforce, driving demand for new skills across industries and creating high-quality jobs. With effective policies, legal frameworks, investments, and support, underpinned by sector-specific, risk-based approaches to AI deployment, AI can create opportunities for workers, innovators, apprentices, and students preparing to enter the labor market. AI has the potential to serve as a powerful tool for augmentation, unlocking new levels of creativity, economic opportunity, and productivity that allow workers and innovators not just to adapt, but to thrive and lead in the 21st century economy.

_____ pledges to put workers at the heart of this AI-driven transformation, recognizing that AI may contribute to evolving labor demands across sectors. We believe AI presents a significant opportunity to expand economic growth, improve quality of life, and deliver greater prosperity. To this end, we support ***The G20 AI Prosperity Objectives*** and will, on a voluntary basis, invest in workforce training, education, reskilling, and upskilling initiatives that equip workers with the knowledge and skills needed to succeed in an AI-powered job market.

We seek to expand hiring opportunities for talent, creating career pathways for the workforce to advance into high-quality jobs in the industries of the future, including through partnerships with scientific, technical, and educational institutions and research organizations. By prioritizing the prosperity of all our workers, we will help ensure that the benefits of AI innovation are widely shared and secure a prosperous future.
